

Originally founded in 1988 in Birch River, West Virginia as Allegheny Land Surveying, Allegheny Surveys, Inc. became incorporated in 1994. Since that time, ASI has been providing the natural gas, coal and timber industries with surveying and mapping services.

ASI's services integrate a complete range of GNSS technology — implementing Static, RTK or VRS in nearly every surveying service performed.

Staying abreast of the latest technology, Allegheny Surveys offers 3D High-Definition Scanning and Modeling, and by use of UAV LiDAR and Mobile Scanning systems, ASI provides highly efficient ways to collect 3D Laser Scan data.

ASI also offers full engineering and site design services for well pads and impoundments through their sister company Hornor Brothers Engineers.
